Service & Technical Maintenance

Dear Sir!

We are a company producing the replacement parts (blades & fans) for the industrial air coolers and water-cooling towers. We are working with refineries, gas-producing&-transporting, petrochemical and chemical factories.

We have 14 years' experience of manufacturing that can prove and guarantee stability, quality of our products, good relationship with the customers. Our main clients in Russia&CIS are "Sibur" OJSC, "Gazprom" OJSC, "Rosneft" OJSC, "Lukoil" OJSC

It would be our honor and pleasure to work with your company.
Please take a moment to check out our offer and website to find out possibility of our cooperation.
Looking forward to hear from you soon..

Quality and Technology

Fan impellers consist of a metal hub and fiberglass blades. The blades of the impellers are made from the composite material based on the structural fiberglass and epoxy resin. In our production we are using contact method under the pressure followed by the thermosetting without any junctions between input and output edges of the blade.

Advantages

In our production process we are using the polymeric material that can conduct a current as it has a specific volume of the electrical resistance (less than 104 ohm * cm).

Also the front edge of the blade has a high-strength polyurethane coating that prevent erosion of the impellers working in the environment with high content of the abrasive substances.

Sincerely,
General Manager

A.V.Golikov
